

## FOUR CORNERSTONE MYSQL SERVICES

Four Cornerstone, LLC., founded in 2004, as a leading consulting, information technology and professional services corporation based in Fort Worth, Texas. Our firm is built on a foundation of deep experience with advanced IT and database technologies, best practices, enterprise technology knowledge and stakeholder satisfaction. At Four Cornerstone, we begin by addressing the question "What problem are we solving?" Our working strategy is to understand the problem, articulate appropriate solutions and support a trusted relationship for successful project implementation.

In working with some of the top brand companies in the Fortune 500, as well as smaller organizations, our team of subject matter experts have led projects with most all of the database technologies in the industry, including Oracle, MySQL, AWS EC2, mongoDB, DB2, Informatica and Postgres. Four Cornerstone experts are seasoned professionals with experience across multiple industry sectors, allowing a best-practices type approach to apply their talents in support our clients.

In addition to the subject matter areas such as cloud services, custom application design and development, enterprise security, virtualization and high-availability, our expert staff have extensive, hands-on experience with MySQL from database upgrades to migrations to tuning and proactive monitoring.

### We support MySQL solutions in a variety of areas including:
